

Scurri

Cloud based delivery management platform

Our software will simplify the way you manage your deliveries

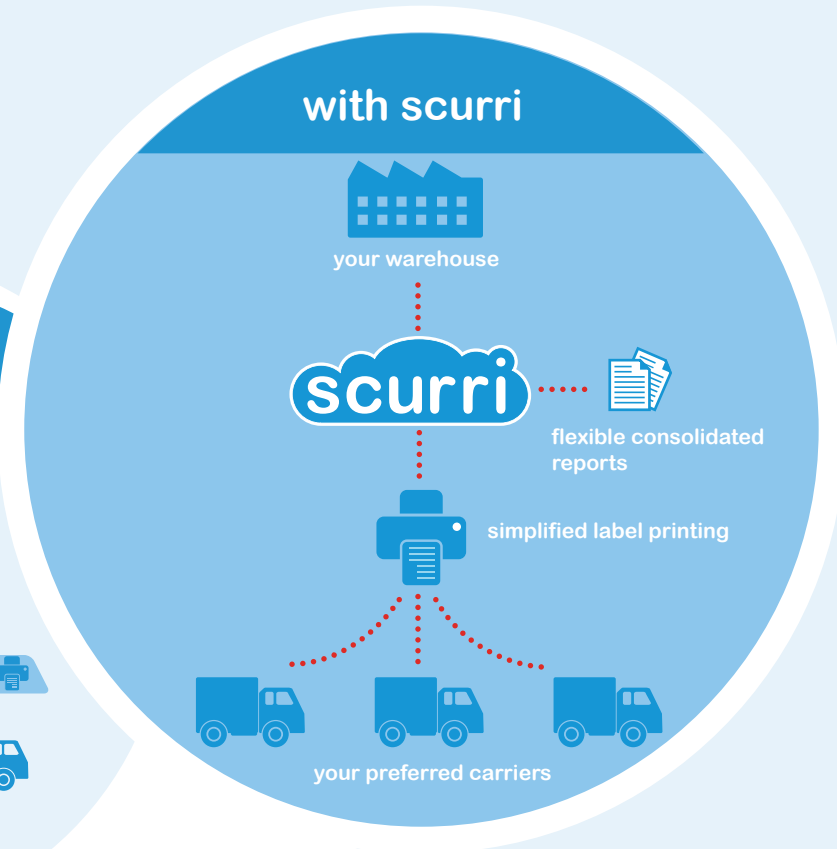

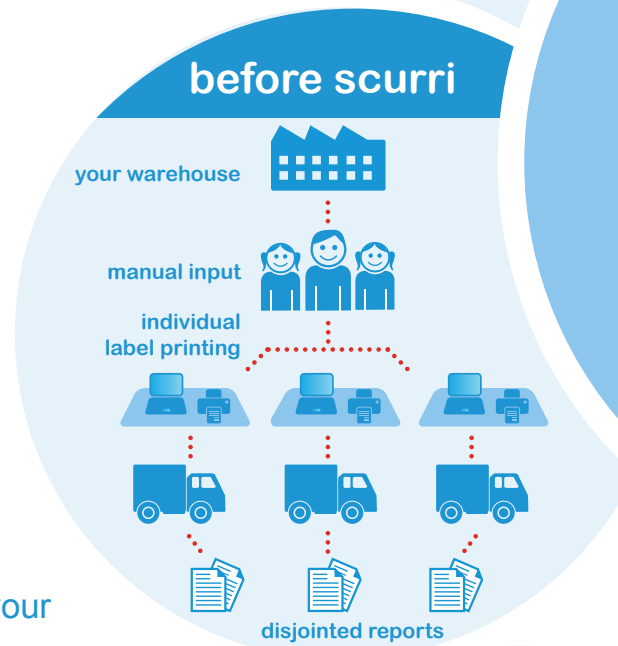

How it works

We integrate with your existing e-commerce platform or warehouse management system. This integration is fast and hassle free.

We offer a simple solution that automatically selects a carrier and service based on pre-defined rules chosen by you.

We provide powerful analytics on your carriers performance and cost.

You can access real time tracking data for all your carriers from your Scurri dashboard.

What Scurri can offer your business

Customer Service

At Scurri we value our customers. We believe that by offering exceptional customer service this will help us to continuously improve our product and service. We take a hands on approach with each customer to ensure all queries are dealt with as quickly as possible and we regularly ask our customers for feedback.

Agility

Scurri's approach to customer integration is quick and hassle free. By offering a cloud solution the Scurri platform can be delivered quickly and in some cases instantly. Our platform can connect to just about any system (ERP, Warehouse Management System, Order Management System) via an API.

Multiple Carrier Integration

Scurri's platform facilitates multiple carriers making it easy to integrate new and existing carriers selected by you. For each parcel/package you need to deliver, our system automatically chooses the right carrier based on your predefined rules and prints all labels from one single source.

Scalability

Scurri offers a platform solution that is scalable. As your business continues to grow our solution will grow with you and there is no need to switch platforms as your company develops. Our engineers have experience working with some of the top IT companies in the world and can deliver a solution that will handle extremely large volumes as your demand increases.

Scurri's Key Features & Benefits

Shipment Rules

Our order automation rules are designed to eliminate repetitive manual processes when selecting the carrier and service for the packages you're sending. You simply set the rules once and the software does the rest. You can choose rules for orders of a certain value, a particular weight, or a particular destination (and many other reasons).

Label Generation

Generate all your shipping labels from a single printer. You don't need to learn how to deal with lots of different complicated label generation systems, just the simple, easy to use Scurri Software which was designed with simplicity in mind. You can print all the different labels you require with a click of a button using the one printer. It doesn't matter what type of printer you use, we can support it.

Effective Reporting

Get meaningful reports showing the performance and cost of each carrier and their delivery performance and keep an eye on your delivery costs. You can drill into each carrier to get information on the services you've used over any time period.

Unified Tracking

You no longer need to access different tracking systems for different carriers. Scurri's unified tracking module grabs the latest status, and all the history of any consignment for your customers orders and gives that back to you where you need it, alongside of all your orders shipping information.

What our customers say

about our intelligent delivery solution for eCommerce

“ Works very very well! Very simple, exactly as it needs to be for me, doesn't need anything else! Cracking job! Saves me from typing in addresses which is a pain and I can really see the benefit when it comes to Christmas. ”

Daniel Crow
Open Lifestyle Store

“ It's been so much quicker and easier than having to type orders in manually, also the design of it is spot on, nice and clean, modern and friendly. If my business grows to the point I can't pack orders myself anymore, I'd feel super confident that someone else would be able to pick it up simply and quickly! ”
